

1. TITLE OF THE EXPERIMENT

Design and Implementation of an HTML Web Page Demonstrating Text Formatting, Tables, Hyperlinks, Multimedia and Forms – “College Information Portal”

2. AIM

To design and implement a static HTML web page for a College Information Portal that demonstrates the use of various HTML elements – document structure tags, text formatting tags, hyperlinks, ordered/unordered lists, tables, images, forms with different input types, and audio/video embedding.

3. ALGORITHM / DESIGN

- Step 1:** Create the basic HTML document skeleton using `<html>`, `<head>`, `<title>` and `<body>` tags.
- Step 2:** Design the page header using `<header>`, `<h1>` and a navigation bar using `<nav>` with `<a>` hyperlinks (internal and external, `target="_blank"`).
- Step 3:** Add an “About” section with formatting tags `<b>`, `<i>`, `<u>`, `<sup>`, `<sub>` and ordered (`<ol>`) / unordered (`<ul>`) lists for departments and facilities.
- Step 4:** Display student details using a bordered `<table>` with `<tr>`, `<th>` and `<td>` tags.
- Step 5:** Insert the college image using the `<img>` tag with `src`, `width` and `alt` attributes.
- Step 6:** Build a Student Registration `<form>` using text, email, password, radio, checkbox, select, textarea, date, color, range, submit and reset input types.
- Step 7:** Embed audio and video content using the `<audio>` and `<video>` tags with the `<source>` element.
- Step 8:** Add a `<footer>` with copyright and contact information.
- Step 9:** Save the file with a .html extension and execute it by opening it in a web browser.
- Step 10:** Observe and verify the rendered output against the expected result for each element.

4. TEST CASES & EXECUTION DATA

TC No.	Feature / Tag Tested	Expected Result	Status
TC-01	Navigation hyperlinks (<code><a></code>)	Clicking links navigates to Home/About and opens ANITS site & Google in a new tab	Passed
TC-02	Text formatting (<code></code> , <code><i></code> , <code><u></code> , <code><sup></code> , <code><sub></code>)	Bold, italic, underline text render; $X^2+Y^2=Z^2$ and H_2O display correctly	Passed
TC-03	Ordered & unordered lists	Departments shown as a numbered list; Facilities shown as a bulleted list	Passed
TC-04	Student details table	Table displays Roll No, Name, Branch, Email in a bordered grid	Passed
TC-05	Image display (<code></code>)	ANITS image loads at width 350px with alt text as fallback	Passed
TC-06	Registration form inputs	Text, email, password, radio, checkbox, select, textarea, date, color and range fields accept input	Passed
TC-07	Submit / Reset buttons	Reset clears form fields; Submit triggers form submission	Passed
TC-08	Audio & Video embedding	Audio and video players render with playback controls	Passed

5. LEARNING OUTCOME / RESULT

Successfully designed and implemented an HTML web page for a College Information Portal incorporating structural tags, text formatting, hyperlinks, lists, tables, images, a multi-field registration form, and audio/video embedding. The output was verified in a web browser and matched the expected rendering for all test cases.

This experiment strengthened the understanding of core HTML5 elements and their attributes used in front-end web development.
